I have chosen to do the Foundation 4 project.

YouTube Videos Tracker: This program manages YouTube video data, including titles, authors, lengths, and comments, giving easy storage and display of video information.

Online Ordering System: Designed for online sales, this program handles product, customer, and order details, computing prices and generating labels for shipping.

Event Planner: Organizing events efficiently, this program categorizes different event types, manages their details, and generates marketing messages accordingly.

Exercise Tracker: Tailored for fitness enthusiasts, this program monitors various exercise activities, giving summaries for each activity type, such as running, cycling, and swimming.
